WEB PERFORMANCE SUITE

Web Performance Suite: The Choice for Delivering Website Content and Applications across the Global Extended Enterprise

CDNetworks enables organizations to cost-effectively deliver website content and applications in a high-performance and robust manner across the extended enterprise and around the globe. This capability is critical to two types of businesses: Fortune 2000 companies seeking to expand sales and operations abroad and newer companies with web-based, Software-as-a-Service (SaaS) business models. Both must serve a widely dispersed audience of customers, employees, vendors, partners, and suppliers. To help Fortune 2000 and SaaS companies meet this challenge, the CDNetworks Web Performance Suite provides an integrated solution and single point of accountability for the delivery of all types of website content and mission-critical applications.

We underpin our Web Performance Suite with all the infrastructure components necessary for both maximizing performance and ensuring resiliency and scalability. These include cloud-based services for DNS, load balancing, and storage as well as a portal providing insight into real-time and historic intelligence. By leveraging infrastructure from our cloud, we provide seamless capacity on demand. This relieves a tremendous management burden from our customers, many of which take advantage

of the Web Performance Suite's full complement of acceleration services, including China Acceleration, Content Acceleration, Dynamic Web Acceleration, and Media Acceleration.

We implemented our global content delivery network (CDN) with the extended enterprise in mind. Recognizing the tremendous growth of many countries' Internet communities and their importance to enabling the extended enterprise, we set ourselves apart from other CDN providers by establishing licensed business operations and content delivery infrastructure on five continents. In fact, we are the only CDN provider to offer full scalability, reliability, and performance for content and application delivery for local and regional audiences as well as far off places like China and Russia.

WEB PERFORMANCE SUITE

Why CDNetworks Web Performance Suite for Your Content and Application Delivery?

BETTER PERFORMANCE, RELIABILITY AND SCALABILITY AT A LOWER COST

Web Performance Suite provides substantial savings over in-house provisioning of infrastructure and services. Now you can satisfy your end users around the globe without the burdensome costs of over-provisioning.

SINGLE POINT OF ACCOUNTABILITY

Many factors affect performance and uptime of web-based applications and content. Rather than managing the finger-pointing between multiple service providers, you can offload full responsibility for service and support to CDNetworks, backed by a 100% uptime guarantee.

TRULY GLOBAL REACH

With more than 100+ POPs located across 6 continents, CDNetworks provides leading companies with over 1,100 Gbps of global capacity.
