

# SD-WAN

A one-stop solution for all your enterprise interconnectivity needs

**QoS function  
guarantees the  
stability of key  
services**

**Improved  
transmission link  
and network  
transmission speed**

**Improved data flow  
and bandwidth  
utilization**

CDNetworks SD-WAN provides enterprises with exclusive network services that are convenient, secure, stable, flexible, controllable and easy to maintain. It also provides one-stop and efficient solutions to meet the needs of inter-access and interconnection between enterprises and cloud platforms, data centers, branches, etc.

# Product Features

Once the solution is deployed, it's business as usual - simply start your business as you always do.

## Business can be opened with one-touch through the web portal

Administrators can quickly open businesses according to menu bar prompts and in accordance with business demands.

## Visual Monitoring of Network Status

Graphic markers for resource utilization, triggering of alarm alerts, and effective monitoring of network operation status is possible through an easy-to-use graphical interface.

## WAN acceleration function

- QoS function guarantees the stability of key services.
- Technologies such as expanded transmission window and improved congestion control are applied to make a difference in TCP transmission efficiency.
- Stream compression technology is used to transmit data after compression, which reduces the amount of data transmission. The transmission speed is increased by byte stream caching and other technologies.

## Automatic switching between primary and standby nodes and high availability

Sites can choose to access different POPs. Intelligent monitoring system can detect the real-time health of POP nodes.

## Rich POP node resources

POP node resources cover the whole world, so that each user can choose access from all corners of the globe.
